

```

import mongoose from 'mongoose';

const todoSchema = new mongoose.Schema(
  {
    title: {
      type: String,
      required: true,
    },
    complete: {
      type: Boolean,
      default: false,
    },
    creator: {
      type: mongoose.Schema.Types.ObjectId,
      ref: 'User',
      required: true,
    },
    // doesn't know how to define the string array in js
    subTodos: [
      {
        type: mongoose.Schema.Types.ObjectId,
        ref: 'subTodo',
      },
    ],
  },
  { timestamps: true }
);

export const toTo = mongoose.model('todo', todoSchema);

```

subTodo - mongoose Schema and model

```

import mongoose from 'mongoose';

const subTodoSchema = new mongoose.Schema(
  {

```

```
    content: {
      type: String,
      required: true,
      unique: true,
    },
    marked: {
      type: Boolean,
      required: true,
      default: false,
    },
    creator: {
      type: mongoose.Schema.Types.ObjectId,
      ref: 'User',
    },
  },
  {
    timestamps: true,
  }
);

export const subTodo = mongoose.model('subTodo', subTodoSchema);
```
